

VALCOUR™

Simply powerful CAD/RMS

VALCOUR™ is ushering in a new era for CAD/RMS systems. It's state-of-the-art open systems web design combines security with simple system administration. The VALCOUR™ interface is simple and intuitive. It supports a procedure-based workflow for all the different roles within an agency. It is simply powerful.

Features and Benefits

Basic Design Principles

- No duplicate data entry!
- Accessible from everywhere
- Support secure information sharing among agencies and across jurisdictions
- Leverage current hardware, while supporting emerging technologies (e.g., smartphones and tablets)
- All help and training resources available online

Procedure-based Workflow

- The easy-to-use interface supports the workflow for each user role.
- Incidents are laid out from the initial call to prosecution
- Individual work queues allow the user to focus on their assignments
- Incident data views are tailored to users' roles

Basic Support Principles

- The Agency has 100% control over their data
- The system is securely accessible from anywhere
- All updates and upgrades are included with the optional standard support/maintenance contract
- System administration is server-based, user access is browser-based. No more upgrading desktops

Incident-based Data

- All incident information is laid out in one easy-to-navigate screen
- Users have a complete up-to-the-minute view of all data
- Users have the ability to update the incident as information becomes available
- Users have the ability to view the disposition of any incident at any time
- Any type of file (documents, photo, sound or video) can be attached to an incident
